

## **RADIOSERVICE COMPANY**

Radioservice company is actively working on the market of radio control systems and information security for 25 years. The company has gained wide experience in development and production of radio electronic equipment over the years. We constantly improve our radio receiving equipment and radio control systems and we have also started designing transmitter-receiver equipment for radio location and radio monitoring systems.

Development of new UHF technologies allowed us to advance in the sphere of frequencies above 30-50 GHz. We have designed panoramic and scanning receivers featuring speeds of frequency range analysis from 5 GHz/s and higher, which allowed us to create optimal by price/performance ratio multichannel, or multipoint, systems. New version of RS Jet receiver, apart from digital radio, contains a built-in computer, which enables creation of distributed radio control systems in buildings and facilities without laying a bulky HF cable and it allows you to carry out parallel processing of information in selected radio control points.

Our company also produces mobile portable search systems Spectrum Jet, which meet the most modern requirements and do not have analogues on the Russian market. By their parameters, our mobile portable search systems are similar to such equipment as OSCOR blue produced in the USA by REI company.

Moreover, Radioservice is an exclusive producer of built-in and distributed systems of intellectual jamming of mobile communication and radio access. The systems are designed for blocking mobile phones, smartphones with Wi-Fi or LTE, etc. in controlled areas - offices, buildings, facilities and territories.

Our company offers turnkey solutions of equipping conference and negotiations rooms, offices, VIP-zones, floors and the whole buildings for several years already. Our clients are government authorities, security agencies, major industrial and financial corporations, banks, as well as many companies and organizations working with secret and confidential information.

Nowadays our company develops portables and mobiles intelligent jammers which can be reprogrammed to different types of tasks and can be controlled by LAN and Wi-Fi. The power in unstoppable mode can be 50 W and effective power in temporary multiplexing is - to 400 W.

Our specialists have gained broad experience in installing and putting into operation distributed radio systems. We not only install the systems, we develop and produce nearly all the equipment included into the system set. Our partners are famous researching and

industrial companies, for example “CNITRI of academic A.I. Berga” and KB “Radar” in Minsk.

Our address:

OOO SPF “Radioservice”.

125130, Moscow, Staropetrovskiy proyezd, 7A, building 25.

Tel./Fax: +7 (495) 627-57-17

Working hours:

from 10 to 19 p.m., (except Saturday, Sunday and holidays).
